Cyber Security Consultant

Are you hoping to work with like-minded people contributing to nationally important Cyber Security projects? Do you want to break-in to a cyber career but are not certain how to go about it? Do you already have a grounding in cyber and want to transfer it to a civilian consultancy role?

Arcanum Cyber are a well-established, forces-friendly, cyber security consultancy working mainly in Defence, but with an increasing and diverse client base. We employ 65% ex-military, with many of the remainder being forces families. As a result, we know how to take your existing skills, improve them and set you on the path to success.

The knowledge and experience you've gained over your career in the Armed Forces is hugely valuable, especially your leadership, management, teamwork and communication skills when dealing with our key stakeholders that you will be interfacing with regularly and independently. But more important is your baseline knowledge and general interest in cyber security.

We don't expect you to be the complete package, but we would hope that you at least know your way around JSP604/440, and have some idea as to how Security Accreditation and Security Assurance Coordination is delivered in Defence. Or you may have experience in another cyber security related area such as Critical National Infrastructure or other Operational Technology. If you have the potential and baseline experience, we'll take care of the next level of training required.

The people we are looking for may be employed in:

• Conducting audits of technical, physical and procedural security at client sites,

• Conducting Risk Assessments for security and/or information assurance;

• Designing, engineering or managing new and existing IT systems;

• Advising and assisting in the specification, design, and implementation of security mitigation measures for new and existing IT projects;

• Producing requisite Security Accreditation evidence for HMG IT systems;

• Designing, engineering or conducting security audits on CNI OT systems;

Training is provided as necessary, including wider cyber development training. You will be predominantly home based, but must be willing to travel to client and supplier sites, averaging 2-3 days per week. We have contracts based throughout UK, but our main clients are predominantly in the West Country and South-Central England.

We encourage flexible working hours where applicable and we pride ourselves as being a "grown-up company for grown-ups". We provide a good package of benefits and perks, with pay around £48k-£58k depending on experience and qualifications.

We don't specify any particular skills or qualifications, but you are probably experienced in an area such as Intelligence, Communications or IT, preferably with a demonstrable cyber security element. Certifications and qualifications in any cyber related area, such as IT Security, Operational Technology, Cloud Security, Network Security, Security Architecture, Penetration Testing or Digital Forensics will help make your application stand out.

Apply with a CV and covering letter to recruitment@arcanumis.com

If you are still serving or recently left, we are more than happy to receive a military jargon CV.
